

# ONLINE RETAILING: HOME DELIVERY, COLLECTION AND RETURNS – GERMANY – 2023

The online channel has a strong value perception which drives demand, but retailers need to step up their sustainability efforts to cater to eco-conscious consumers.

A Mintel Analyst, Global Analyst

# Online Retailing: Home Delivery, Collection And Returns - Germany - 2023

## This report looks at the following areas:

- The impact of the cost-of-living crisis on online purchases, deliveries and returns
- Online channel usage and products purchased
- Preferred way of receiving online purchases
- Preferred mode of collecting online purchases and ways to increase the use of click-and-collect
- Issues experienced when receiving, collecting and returning online purchases
- Interest in convenient GPS-based delivery and longer return periods
- Behaviour towards sustainable delivery methods
- Reactions to delivery and return charges and the chances that arise for delivery passes

The online channel has a strong value perception which drives demand, but retailers need to step up their sustainability efforts to cater to eco-conscious consumers.

## Overview

**High inflation** is taking a toll on the budgets of online shoppers, resulting in falling sales for online retailers in 2023. Despite less demand, the **market will remain** stronger than before the pandemic **and will continue to attract price-sensitive consumers**.

While only **29% of German online shoppers** use click-and-collect services, they are likely to become more popular due to cost-efficiencies and being more sustainable than last-mile deliveries. Long wait times and restricted collection hours are the main issues experienced, revealing the **need to boost flexibility and speed**.

\*These prices are correct at time of publication, but are subject to change due to currency fluctuations.

**Charges for postal returns** make **returning in-store** more appealing for **45% of German online shoppers**, allowing multichannel retailers to benefit from reintroducing fees. But pure online players need to be aware that **35% of online shoppers** believe that **ordering extra products and returning the excess** is a good way to meet free online shopping delivery limits, demonstrating the lengths consumers will go to avoid fees.

**60% of Gen Z** prefer ordering from retailers offering sustainable delivery options, stressing the need to reduce the carbon footprint of deliveries. As **54% of male online shoppers aged 16-24** would pay more to **get online purchases delivered to their GPS coordinates, uber-convenient delivery methods** could be introduced as a premium service.
